Education

Indian Institute of Technology, Jodhpur

Bachelor of Technology, Electrical Engineering; CGPA: 7.65

Aug 2024 – Present

Shree Subhash Bose Senior Secondary School, Ladnun

Senior Secondary (Class XII); 94.40%

Apr 2023

Projects

PrepAI – AI Interview Preparation Platform

Mar 2026 – May 2026

React.js, Node.js, Express.js, MongoDB, JWT, Google Gemini SDK, Puppeteer, Multer, pdf-parse

GitHub | Live

- Engineered a production-grade full-stack AI platform that analyzes user resume, job description, and self-description to generate a resume-job match score, skill gap analysis, technical questions, behavioral questions, and a 7-day prep roadmap, reducing manual interview prep effort by an estimated **70%**.
- Integrated **Google Gemini SDK** with pdf-parse for resume extraction to produce structured, role-specific interview content stored in **MongoDB** via Mongoose, using schema design and aggregation pipelines with full CRUD support.
- Established **cookie-based JWT authentication** across **12+ protected REST API routes** with React Context session management, including automatic token-expiry redirect to login.
- Developed server-side ATS resume PDF generation via **Puppeteer** streaming binary output directly to the browser, and a global Axios interceptor eliminating per-route HTTP 401 handling entirely.

Smart Route Finder System

Sep 2025 – Nov 2025

C++, Dijkstra's Algorithm, DFS, Graph Theory, STL (map, priority queue, set)

GitHub

- Designed and implemented a weighted graph-based routing engine in **C++** supporting multi-criteria shortest path computation (cost, time, and composite weighted metric) across dynamically loaded city networks using **Dijkstra's algorithm** with an STL min-heap priority queue.
- Constructed a **DFS**-based top-K path enumerator with backtracking and duplicate elimination via path-string hashing, exposing ranked alternate routes beyond the single shortest path.
- Devised a **TSP**-style multi-city trip planner using permutation search over per-leg Dijkstra results to find the globally optimal city visit order minimising total cost and travel time.
- Engineered full **CRUD** operations on graph nodes and edges across a network of **50+ cities** via file-persisted data stores with input validation and case-insensitive city matching.

Recipe Recommendation System

Feb 2026 – Apr 2026

Python, Flask, scikit-learn, TF-IDF, PCA, KMeans, KNN, React.js, Tailwind CSS

GitHub | Live

- Built a full-stack ML web app serving real-time recipe recommendations over a dataset of 1,000+ recipes using a multi-modal feature pipeline combining **TF-IDF** on ingredients, One-Hot Encoding for cuisine, and MinMax Scaling for cook time, improving recommendation relevance **~25%** over a TF-IDF baseline.
- Applied **PCA** (50 components) for 60% dimensionality reduction; used **KMeans + KNN** for cuisine classification, achieving **~88%** 5-fold cross-validation accuracy.
- Exposed dual-mode querying (Cosine Similarity and Euclidean Distance) via two dedicated **Flask REST API** endpoints with CORS handling and JSON validation, consumed by a React.js frontend.

Full-Stack Portfolio Website

Nov 2025 – Jan 2026

React.js, Node.js, Express.js, Three.js, Framer Motion, Resend

GitHub | Live

- Built a full-stack portfolio website with a React frontend and Node.js/Express backend, achieving **100/100 Best Practices and SEO** scores with mobile-first responsive design.
- Integrated an interactive **Three.js** based 3D background to enhance user engagement without degrading load performance.
- Developed a **REST API** for the contact form with server-side validation and email delivery using the **Resend API**.
- Designed a responsive, accessible interface using modern frontend practices and mobile-first layout principles.

Technical Skills

Languages: C, C++, JavaScript (ES6+), Python, SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Three.js, Framer Motion

Backend: Node.js, Express.js, Flask, REST APIs, JWT Authentication, Middleware

Database: MongoDB, Mongoose ODM

Core CS: Data Structures & Algorithms, OOP, DBMS

Tools & Platforms: Git, GitHub, Postman, VS Code, Vercel, Render, Google Colab

Relevant Coursework & Core Skills

Data Structures & Algorithms | Pattern Recognition & Machine Learning | Digital Design | Signals & Systems | Probability, Statistics & Stochastic Processes | Introduction to Computer Science | Calculus | Linear Algebra

Positions of Responsibility

Assistant Head, Sandstone Summit – IIT Jodhpur Annual Business Conclave

Aug 2025 – Sep 2025

- Managed vendor coordination and logistics for **10 stalls** and informal events at IIT Jodhpur's flagship annual business conclave, bridging academia and industry.

Assistant Head, Varchas 2025 – IIT Jodhpur Annual Sports Festival

Oct 2025 – Nov 2025

- Managed a team of 10 volunteers; oversaw end-to-end logistics and operations across **15+ matches and events** for the annual inter-college sports festival.
